

## **Gas, Oil and Energy**

### **VIDEO CONFRENCING FOR GAS , OIL AND ENEGRYEX**

#### **Extend field expertise and improve critical response strategies with GMeet Video**

##### **Ensure remote accessibility**

Use video conferencing to give remote experts access to more critical projects without traveling between sites.

##### **Manage critical responses**

Assess situations, discuss plans and enable responders quickly and efficiently with video communication.

##### **Streamline operations and training**

Remove travel from the equation and still meet and conduct trainings face to face.

##### **Deploy enterprise-grade security**

All GMeet video streams are securely encrypted by default to exceed privacy requirements.

#### **Benefits of video conferencing for oil, gas and energy companies**

For businesses in the oil, natural gas and energy industry, efficiency is key. Whether you are trying to cost-effectively communicate with workers in the field or managing teams through crisis conditions, seamless collaboration is a necessity. Reliable and secure video conferencing solutions from GMeet connect office workers and field staff instantly, streamlining operations and reducing costs by eliminating the need for unnecessary travel.

##### **Improve access to remote experts**

For companies managing energy or utilities across an entire region, having specially trained experts at all locations can be inefficient and cost prohibitive. With GMeet 4K video conference calls, experts can monitor everything taking place in the field at multiple locations from the comfort of their offices, without wasting time traveling between sites. Your experts can communicate with regional staff in real time and share data with one another to ensure that demand is being met and remote teams are kept in the loop on critical business decision.

##### **Train and execute crisis management**

Efficient crisis management and response is vital for both environmental and organizational reasons. GMeet video conference calls enable responders to communicate face to face in real time to assess situations, discuss contingency plans and broadcast important health and safety communications to their teams — wherever they may be and using any device. Crisis response training can also be conducted and recorded over video conferencing to review successes and extend the valuable information to new hires joining the team.

##### **Provide health care to remote employees and locations**

While many exploration sites have nurses and health-care professionals on staff, they often require whole teams of workers to be away from the nearest specialized medical care facility for months at a time. When a worker at a remote site becomes ill, GMeet video conferencing solutions enable virtual consultations with a remote specialist who can evaluate and offer assistance in real time.

### **Drive more efficient project management**

With workers on exploration sites, offshore rigs and other remote locations scattered across multiple regions, the need for high quality and reliable video conferencing is critical to keeping projects on time and within budget. Video solutions from GMeet help facilitate face-to-face collaboration with support for hundreds of participants while eliminating the need for travel.

## **Why integrate GMeet Video conferencing?**

### **BEST-IN-CLASS 4K QUALITY**

The GMeet VC ROOM 9200 and 90 series delivers 4K video and 4K content sharing to help users pick up on the fine detail needed when reviewing plans or monitoring equipment levels.

### **SUPPORT FOR BYOD AND BROWSER-BASED CALLING**

Download the GMeet app for all of your devices or connect right from your web browser with the GMeet web app. All you need is a webcam, internet access and the link to the virtual classroom, and you're ready to connect.

### **4K GLOBAL NETWORK**

With data centers in every major geography, our industry leading global presence helps you connect with students and professionals around the globe with 4K video and 4K full-motion content sharing quality.

### **SECURE COMMUNICATION**

GMeet uses best-of-breed data centres with independent third-party security and privacy certifications to ensure the most secure and reliable foundation possible for our customers.
